 #EOTEP

Non-Infected Painful Total Hip Arthroplasty | Monday 08 June 2020 | 19:00-20:00 CET

Chair: José Cordero Ampuero | Spain

The Webinar will address the following topics:

- **Introduction**
José Cordero Ampuero | Spain | 5 min
- **Patient Expectations and 'Non-Hip' Origin of the Pain**
Theofilos Karachalios | Greece | 10 min
- **Occult Loosening, Implant Elasticity and Micro-Instability**
Philippe Hernigou | France | 10 min
- **The 'Painful' Material: Wear, ARMD, Allergy.**
Alister Hart | United Kingdom | 10 min
- **When it comes from Anatomy: LLD, Impingement, Offset, Abductors, Great Troc**
José Cordero Ampuero | Spain | 10 min
- **Discussion, Questions and Answers**
All Participants | 15 min

Learning Objectives:

A patient operated on his/her hip complains of pain and/or is unsatisfied. You have discarded infection. What more?

- Objectivize clinical situation: pain intensity, functional limitations, level of activity.
- Other areas are cause of local pain: lumbar spine, abdominal hernias, genitourinary pathology.
- Suspect: loosening without radiolucent lines or migration, too thick / rigid stems, subluxation in extreme positions.
- Discard: poly wear, pseudotumors, particle disease, trunnionosis, ceramic fracture, ALVAL, allergies to metals.
- Reconsider: lower limb discrepancy, inadequate offset, insufficient abductors, tightened adductors, localized trochanteritis and impingement in flex-internal rotation.

This Webinar is organized by the EFORT Orthopaedic Education Group, independent of any commercial education support and hosted by M-Events.
