This webinar ‘Pilon Fractures: Current Insights in their Management’ will focus on the latest advances made in the evaluation and reconstruction of pilon injuries. Specific injury patterns, decision-making, techniques of reduction and reconstruction will be addressed. The objectives of the Webinar are:

- Understanding the issues and challenges that need to be addressed for the management of pilon injuries.
- Realising the need for meticulous evaluation of soft tissues and selection of appropriate timing of intervention.
- Selecting the right surgical approach for optimum access and reconstruction.
- Explaining the principles of open reduction internal fixation utilising essential tips and tricks for fixation.
- Understanding the role of fine wire fixators and the correct application of such method for reconstruction.
- Recognising the characteristics of un-reconstructable injuries and how to manage such cases.
